## NOTICES TO AIRMEN

NOTAM information current as of #a#  
FDC NOTAMS listed thru FDC #3/2585, December 20, 1983

### FOREWORD

This publication is divided into two sections:

(1) The first section contains selected notices which are expected to remain in effect for an extended period, and FDC NOTAMS which are current thru the FDC NOTAM number and date shown above. NOTAMS in this publication will not be included in the Flight Service Station Service A telecommunications system and are not included in pilot briefings unless specifically requested by the pilot. If NOTAMS concerning a facility are included both in the Service A system and this publication, the Service A system information takes precedence, that is, it is considered more current. Similarly, Service A and Class Two NOTAMS take precedence over information in the Airport / Facility Directory. Complete flight information can be obtained by receiving a weather briefing and reviewing both the Class Two NOTAMS and the Airport / Facility Directory.

The selected notices are included to reduce congestion on the teletype circuits. Only those notices which are expected to remain in effect for at least seven days after the effective date of the publication will be included. The number in parenthesis after each entry is the month and year when the item first appeared in this publication.

National Flight Data Center (FDC) NOTAMS primarily reflect changes to Standard Instrument Approach Procedures. FDC NOTAMS also establish Flight Restrictions and correct data on aeronautical charts.

The last FDC NOTAM included in the publication is noted by number and date. This will aid the user in updating the listing with any FDC NOTAMS which may have been issued after publication.

The cutoff date for information to be included in this section is three weeks prior to the effective date of the publication.

The content of these notices vary widely and there are no specific criteria for inclusion, other than their enhancement of flight safety.

The cutoff date for information to be included in this section is three weeks prior to the effective date of the publication (seven weeks prior if graphics will be required).

All the information contained in this publication will be carried until the information expires, is cancelled, or in the case of permanent information, is published in the appropriate publication, e.g., the Airport / Facility Directory.

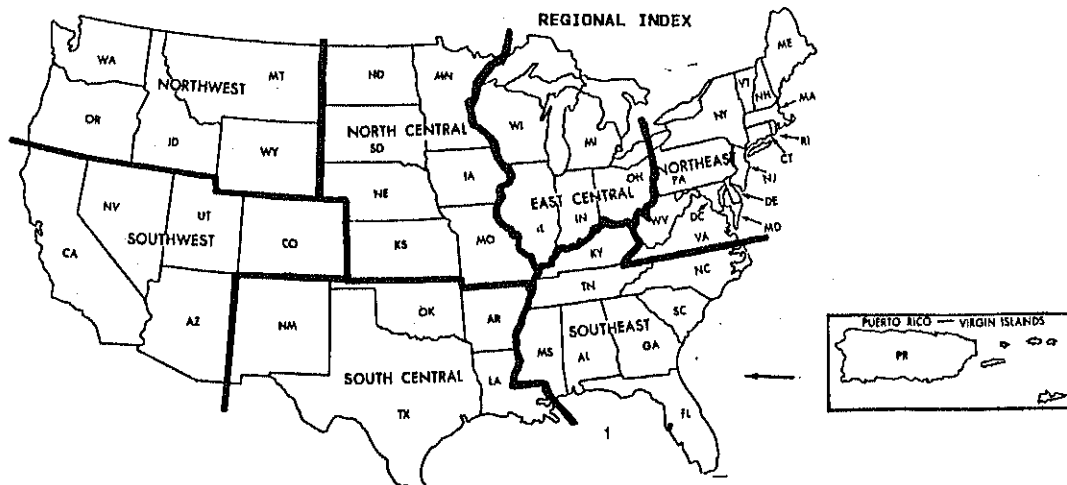

NOTE: ALL times are indicated as GMT or local. During periods of Daylight Saving Time, effective hours in local time will be one hour earlier than shown. All states observe daylight saving time except Arizona, that portion of Indiana in the Eastern Time Zone, Puerto Rico, and the Virgin Islands.

NOTE: Underscored items (except city names) indicate new information in this issue.

### FDC NOTAM LEGEND

4/103 ----- Accountability number assigned to the message originator.  
FI/T ----- Flight Information of a Temporary nature.  
FI/P ----- Flight Information of a Permanent nature.

(2) The second section contains special notices that, either because they are too long or because they concern a wide or unspecified geographical area, are not suitable for inclusion in the first section.

FDC 3/1228 THE U.S. GOVERNMENT HAS INFORMATION  
INDICATING THAT AIRCRAFT FLYING OVER IRANS OFFSHORE  
OIL FACILITIES IN THE PERSIAN GULF WHO HAVE NOT  
FILED A FLIGHT PLAN COVERING THEIR ROUTE OF FLIGHT  
AND THE TIME OVER APPROPRIATE CHECKPOINTS MAY BE  
FIRED UPON WITHOUT NOTICE. OPERATORS OF U.S.  
REGISTERED AIRCRAFT SHOULD NOT PLAN FLIGHTS OVER  
THE PERSIAN GULF EAST OF AIRWAY B-55 OR NORTH OF  
AIRWAY A-55. OPERATION OF AIRCRAFT OVER THE PERSIAN  
GULF OTHER THAN THE ABOVE MUST OBTAIN VERIFICATION  
FROM THE IRANIAN ATC AUTHORITY THAT ACKNOWLEDGES  
RECEIPT OF THE FLIGHT PLAN. NO FLIGHTS MAY BE MADE  
OVER THE AREA EAST OF AIRWAY B-55 OR NORTH OF  
AIRWAY A-55 WITHOUT THIS ACKNOWLEDGEMENT. BE  
ADVISED THAT BAHRAIN CENTER DOES NOT HAVE  
COMMUNICATIONS WITH TEHRAN CENTER AND CAN NOT  
FORWARD FLIGHT PLAN INFORMATION. VERIFICATION FROM  
TEHRAN CENTER MUST BE RECEIVED DIRECTLY EITHER  
VERBALLY OR BY TELEX.

HAZARDOUS INFIGHT WEATHER ADVISORY SERVICE (HIWAS)

HIWAS is a national program for broadcasting hazardous weather information (SIGMET's, convective SIGMET's, AIRMET's, and urgent PIREP's) on a continuous basis over selected VOR's. The program is now operational in the Jacksonville and Miami ARTCC areas. The chart below identifies the present HIWAS broadcast outlet locations and frequencies. HIWAS will be expanded on an ARTCC by ARTCC basis.

The Federal Aviation Administration will begin an evaluation of proposed HIWAS procedural revisions on December 16, 1983. During the evaluation, SIGMET's, convective SIGMET's, AIRMET's, and urgent PIREP's will continue to be broadcast over the VOR's on the chart below. In addition, FSS's will add to HIWAS broadcasts information on hazardous weather not yet covered by an advisory and make an announcement on their frequencies that new HIWAS information is available. Controllers in ARTCC's and ATC terminals will announce updates to HIWAS information on all appropriate frequencies. Controllers and specialists will not routinely broadcast SIGMET's, convective SIGMET's, or AIRMET's in the commissioned HIWAS areas.

PILOTS SHOULD BE ALERT FOR HIWAS UPDATE ANNOUNCEMENTS ON COMMUNICATIONS FREQUENCIES.

User comments regarding the effectiveness of the HIWAS program and the proposed revision to HIWAS procedures are solicited.

Washington, D.C. and Columbus, Ohio Public Demonstration  
Voice Response System (VRS) Changes

The Federal Aviation Administration is conducting a computer generated Voice Response System (VRS) public demonstration in the Washington, D.C. and Columbus, Ohio areas. Pilots access the VRS via push-button (Touch-tone<sup>R</sup>) telephones, and normally have six weather products available.

Due to a maintenance requirement the six (weather) product VRS has been taken off the line, and temporarily replaced by a three-product system. Weather products lost are the TWEB Route Forecast, Convective SIGMET, and Alert Weather Watch. Available are the Hourly Surface Observation (SA), Terminal Forecast (FT), and Winds Aloft Forecast (GF).

Although both systems appear to function the same, the three-product VRS also features an "Unprompted" mode of operation, which enables the user to obtain a weather observation or forecast directly. This mode can be selected by entering \*,M in response to the VRS prompt, "Enter location identifier." The following pilot/VRS dialogue shows key-stroke entries for weather requests using Washington National (DCA) as an example, utilizing the Unprompted mode.

VRS "Enter location identifier"  
PILOT \*,M  
VRS "Enter request"  
PILOT enters any one of the following requests:  
  
Hourly Surface Observation: D-1,C-3,A-1,S,A;##  
Terminal Forecast: D-1,C-3,A-1,F,T;##  
\*Winds Aloft Forecast: D-1,C-3,A-1,#,2,#,8,0;##

Notes:

1. \*The Winds Aloft Forecast entry example above is decoded as follows:  
D-1,C-3,A-1 = Location identifier for Washington National (DCA).  
# = Single "Pound" key used as a data separator.  
2 = Forecast wanted for two hours hence.  
# = Single "Pound" key used as a data separator.  
8,0 = Forecast wanted for 8,000 feet. Notice that the VRS adds two zeroes to your entry, so only enter 2 or 3 digits.  
## = End of data entry.
2. Please notice that for SA and FT requests, the letter entries S,A and F,T are single key-strokes, unlike the double key-strokes required to enter letters and numbers in location identifiers. Similarly, numbers entered for the hours and altitude in Winds Aloft Forecasts are also single key-strokes.

AUTOMATED WEATHER OBSERVING SYSTEM (AWOS)

The Federal Aviation Administration is evaluating the reliability and acceptability of automated weather reporting systems in a one year test beginning in August 1983. Fourteen sites were selected to test a variety of geographical and meteorological conditions. The systems will be of the AWOS-3 category providing altimeter setting and wind data, temperature, dewpoint and density altitude, visibility, and cloud/ceiling data. The test site airports across the continental United States and Alaska are:

Auburn, AL; Bremerton, WA; Dubuque, IA; Galena, AK; Houghton, MI; Houma, LA; Houston (Hobby), TX; Keene, NH; Muncie, IN; Palm Springs, CA; San Luis Obispo, CA; Santa Fe, NM; Valdez, AK; and Washington (National), DC.

As they are installed, frequencies and telephone call-up numbers will be provided in a NOTAM (D) until published in the Airport/Facility Directory.

All aviation users are encouraged to monitor these systems and provide their comments on the quality of the system to local FAA Facilities or fixed base operators.

AIRPORT RADAR SERVICE AREAS (ARSA)  
FOR  
AUSTIN, TEXAS  
ROBERT MUELLER MUNICIPAL AIRPORT  
COLUMBUS, OHIO  
PORT COLUMBUS INTERNATIONAL AIRPORT

Special-5

Special Airspace designations and associated air traffic control procedures will begin at the Austin, Texas, Robert Mueller Municipal Airport on December 22, 1983, and the Columbus, Ohio, Port Columbus International Airport on January 19, 1984. Special Federal Aviation Regulation (SFAR) No. 45 which implements this program appeared in the FEDERAL REGISTER (Vol. 48, Page 50038 on October 28, 1983. The following summary of that SFAR is advisory in nature and does not relieve the pilot from compliance with the specific rules set forth in the SFAR.

An Airport Radar Service Area (ARSA) is designated airspace in which each person operating an aircraft must maintain two-way radio communications with air traffic control (ATC). Ultralight vehicles and parachute jump operations in the ARSA are not allowed except under the terms of an ATC authorization. Within these ARSA's, ATC will, in addition to the services and separation currently applied to aircraft operating under instrument flight rules (IFR), resolve any potential conflict between an aircraft operating under IFR and an aircraft operating under visual flight rules (VFR), as well as provide traffic advisory services and arrival sequencing to all aircraft. Pilots are required to comply with ATC clearances and instructions while operating in an ARSA. The purpose of the SFAR is to confirm any national applicability of the recommendation of the National Airspace Review, Terminal Airspace Task Group 1-2.2., that an ARSA program replace the existing Terminal Radar Service Area (TRSA) program.

Unless otherwise authorized or required by ATC, the following provisions apply to aircraft operations within an ARSA.

1. Aircraft arriving at an airport within the ARSA or on an over-flight course that would penetrate the ARSA must establish two-way radio communication with ATC prior to entering the ARSA and maintain that communication while operating within the ARSA.
2. Aircraft departing the primary airport within the ARSA must establish two-way radio communication with ATC prior to departure and maintain that communication while operating within the ARSA. Aircraft departing a satellite airport within the ARSA must contact ATC as soon as practicable after takeoff.
3. Except in an emergency, all operations must be in compliance with ATC clearance and instructions.
4. All arrivals and departures within the ARSA must be in compliance with FAA arrival and departure traffic patterns.
5. Ultralight vehicles and parachute operations may not be conducted within the ARSA except under the terms of an ATC authorization.

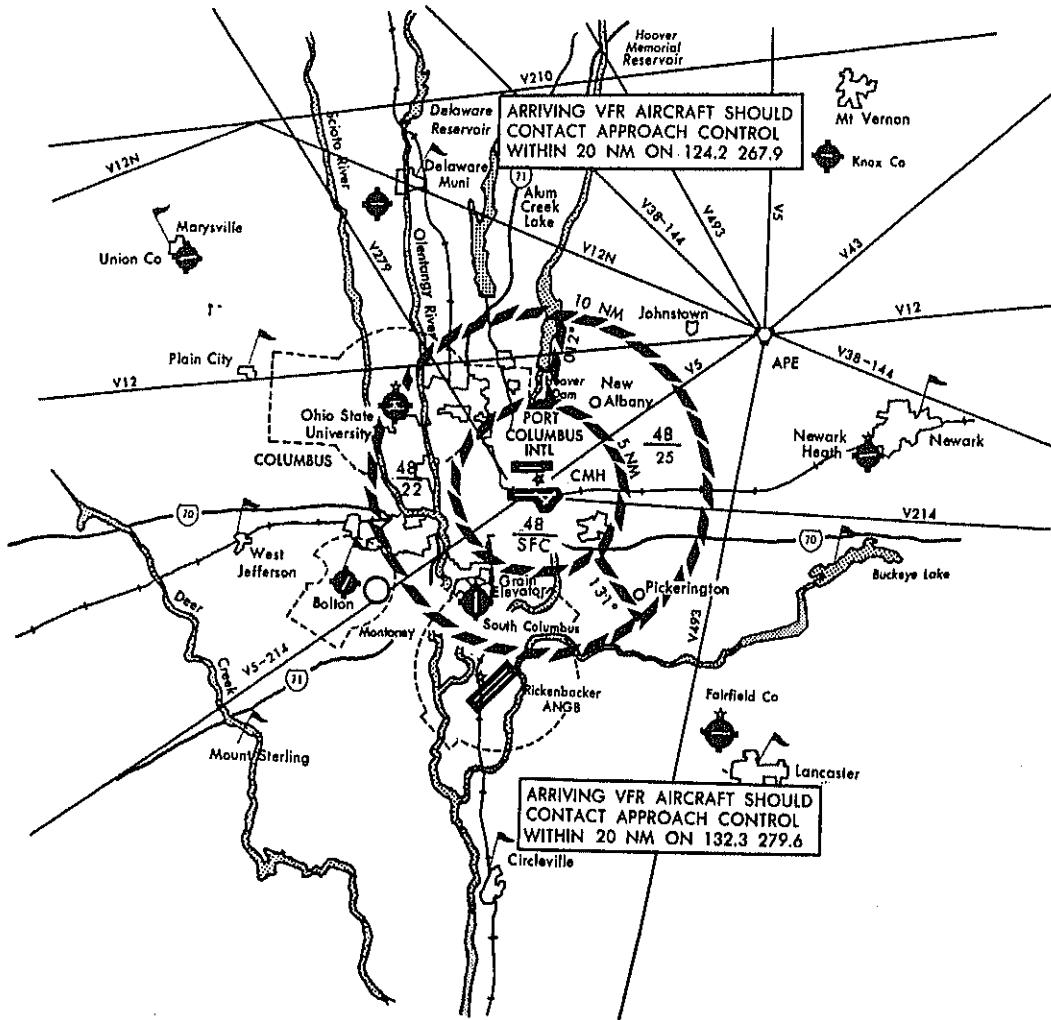

Special-6

6. NOTAM's pertaining to flight within the ARSA must be reviewed as a part of preflight action required by FAR Section 91.5.

See graphics for depiction of ARSA for the Austin, Texas and Columbus, Ohio airports. The same symbology is used to depict ARSA airspace on sectional aeronautical charts. These airspace designations are effective for approximately 1 year.

SUPER BOWL XVIII

SPECIAL AIR TRAFFIC PROCEDURES

TAMPA / ST. PETERSBURG, FLORIDA AREA

JANUARY 20 thru 23, 1984

In anticipation of the large number of aircraft traveling to and from the Tampa/St. Petersburg area during Super Bowl XVIII, the following procedures will be used to enhance safety and minimize air traffic delays.

Aircraft not landing in the Tampa / St. Petersburg area are requested to avoid overflight below 10,000 feet within 10 miles of Tampa International Airport.

All pilots are encouraged to monitor 124.2 MHz for recorded information on the status of airports and operations in the Tampa / St. Petersburg area.

VFR ARRIVALS

Tampa International Airport: Radar sequencing will be provided to aircraft landing at Tampa International Airport. Contact Tampa Approach Control on the designated frequency prior to reaching your VFR entry point (see list & graphic). DO NOT PROCEED BEYOND your VFR entry point until receiving appropriate instructions from Tampa Approach Control.

Other Airports Within the Tampa TRSA: Pilot participation in Stage III radar service is recommended and will be provided to aircraft landing at airports within the Tampa Terminal Radar Service Area. Contact Tampa Approach Control on the designated frequency prior to reaching your VFR entry point (see list & graphic).

Other Airports Within the Tampa Approach Control Area: Radar service will be available to aircraft landing at airports outside the Tampa TRSA on a workload permitting basis. Contact Tampa Approach Control with your request.

VFR DEPARTURES

Tampa International Airport: BEFORE STARTING YOUR ENGINE, contact Tampa Clearance Delivery on 120.9. Inform the controller of your destination or direction of flight, requested altitude, and type aircraft. Stage III radar service is recommended and will be provided to all aircraft, unless specifically declined by the pilot.

Other Airports: Plan your departure path so as to fly AWAY FROM Tampa International Airport. If radar service is desired from Tampa Approach Control, flights operating east of Tampa should use 119.9 MHz and flights operating west of Tampa International Airport should use 125.3 MHz.

Special-10

WAKE TURBULENCE ADVISORY

Due to the large number of heavy jet and military aircraft operating in the vicinity of Tampa International Airport and MacDill Air Force Base, pilots should be aware that a significant amount of wake turbulence may exist. Pilots are urged to be vigilant and exercise extreme caution when operating within 30 miles of Tampa.

SPECIAL ACTIVITY ALERT AND OPERATIONS OVER TAMPA STADIUM

Aircraft operating below 10,000 feet and within 10 miles of Tampa International Airport should remain alert for numerous special aviation activities associated with the Super Bowl. Activities include: sky diving, banner towing, helicopter operations, hot air balloons, and blimps.

Aircraft operations will not be permitted within 3 nm of Tampa Stadium at or below 3,000 feet MSL on January 22, 1984 between the hours of 0800 and 2359 EST unless prior approval has been received from the Tampa Air Traffic Control Tower. Approval must be obtained by telephone on or before January 17 from Tampa Tower. Call (813) 872-1528 weekdays between 0800 and 1600 EST.

FLIGHT PLANS AND FLIGHT SERVICE STATIONS

VFR AND IFR FLIGHTS DESTINED FOR THE TAMPA/ST. PETERSBURG AREA are urged to file flight plans at least 4 hours prior to their proposed departure time. Air filed flight plans with Orlando and St. Petersburg FSS's, and Jacksonville Center will not be accepted during the period January 20 through January 23.

VFR ARRIVAL AIRCRAFT are requested to cancel their flight plans with St. Petersburg FSS via radio on 123.6 or 122.45 and not request Jacksonville Center, Tampa Approach, or Tampa Ground Control to forward the cancellation. Aircraft operating east of the Lakeland VOR may reduce radio frequency congestion by contacting Orlando FSS on 122.65 or 123.65 to cancel their flight plans.

IFR AND VFR DEPARTURE AIRCRAFT wishing to file flight plans are urged to do so at least 4 hours prior to their proposed departure time. Air filed flight plans with Orlando and St. Petersburg FSS's, and Jacksonville Center will not be accepted during the period January 20 through January 23.

SAFETY ADVISORY

Due to the geographic location of the Tampa/St. Petersburg area, many aircraft are expected to be operating through the area to the north of Tampa bounded by the Ocala, Cross City, and Gainesville VOR's. Pilots operating VFR are encouraged to be especially vigilant and consider alternate routing to avoid this area. Pilots operating IFR can expect some delays during periods of heavy demand as a result of ATC sector saturation. Your understanding and cooperation is greatly appreciated.

Have a safe and pleasant journey.
